# DHS Electrodes

Digital High Sensor

## Intelligent Sensor management

Digital High Sensors are the new pH sensors with internal chip, that store parameters, date of last calibration, model and production batch of the electrode. After connecting the pH DHS sensor to the instrument, with the same technology, all the data stored in the sensor chip are automatically transferred to the instrument and shown on the display.

After a new calibration of the DHS electrode, the data are automatically stored in the electrode chip. If we move this electrode to another DHS-enabled instrument, we can start working immediately and with extreme security as the data from the last calibration will automatically be transferred and used for pH measurements.

Our DHS electrodes have integrated temperature sensor, fixed cable with BNC and RCA connectors and work without an internal battery, this allow to store them as normal pH electrode and can be connected to any instrument with BNC and RCA connection.

## HOW TO IDENTIFY THE ACCESSORIES

### FIRST LETTER

**A** = Fixed angle rotor  
**S** = Swing out rotor  
**B** = Bucket  
**SB** = Swing out rotor + Buckets (KIT)  
**L** = Lid of bucket  
**I** = Insert for bucket  
**C** = Cushion  
**RE** = Reductor  
**T** = Tube  
**PCR** = PCR rotor

### CENTRAL NUMBERS\*

**1° NUMBER** = maximum number of tubes  
**2° NUMBER** = capacity of the tube (ml)

Only in the reducers (RE), the central numbers identify the capacity reduction (ml); in case of only one central number, it represents the capacity.  
In the PCR rotor the central numbers identify the number of PCR strips and the number of tubes for each single strip.

### FINAL LETTER

**F** = Falcon® tube or conical bottomed tube included  
**P** = Plastic round-bottomed tube included  
**G** = Glass round-bottomed tube included  
**R** = Suitable for round-bottomed tube  
**X** = Additional bucket (long version)

<b>A 32-15</b>	Fixed-angle rotor for 32 – 15 ml tubes
<b>S 4 -175</b>	Swing out rotor for 4 buckets of 175 ml
<b>B 16 - 5 / 7</b>	Aluminium bucket for 16 tubes of 5/7 ml
<b>SB 4 - 175</b>	Kit composed by swing out rotor S 4-175 and 4 glasses B 175 of 175 ml
<b>I 4-15R</b>	Insert for 4 round-bottomed tubes of 15 ml
<b>RE 50-15F</b>	Conical bottomed reductor from 50 ml to 15 ml

# CENTRIFUGING

The centrifuges are instruments used in many laboratories to separate particles in liquid solutions or in liquids with a different density, using an artificial centrifugal field. The application of the centrifuges allows to develop a much higher force than the Earth's gravity, speeding-up the separation and sedimentation process.

## SWING OUT ROTORS (with variable angle)

During the centrifugation, the tubes turn into a perpendicular position with respect to the rotation axis of the rotor. Therefore, the distance and the time necessary for the sedimentation are higher, but the phases limits develop clearly and perpendicular. The swing out rotors are generally used to centrifuge a bigger quantity of samples at medium speed.

## ANGLE ROTORS (with fixed angle)

The oblique angle of the tubes reduces the sedimentation distance, decreasing the necessary time for the separation of the phases, that are inclined with respect to the tube and less net. The angle rotors are generally used to centrifuge a smaller quantity of samples at high speed.

The simplified formula for the RCF is:

$$RCF = (n/1000)^2 \times r \times 11,18$$

where n = speed (rpm) and r = ray in cm

## CALCULATION OF THE CENTRIFUGAL FORCE

Generally, the performances of a centrifuge are indicated following the maximum achievable speed. However, the speed indicates approximately the real force which developed in the centrifuged sample and which generates the separation. This power expresses as Relative Centrifugation Force (RCF). Its value indicates the multiple of times that the force exceeds the acceleration caused from the gravity "g". Looking at the formula here on the left, the RCF is directly proportional to the ray of the rotor and linked to the square of the speed. This means that the RCF doubles if the ray doubles and quadruples if the speed doubles.

Therefore, the performances of the centrifuges should be compared on values expressed in RCF only.

## SAFETY CLASS 3.1

(STANDARD DIN 12880)

Double over-temperature protection: in case of exceeding in set temperature, an electronic and an electromechanical control, both adjustable by the operator, intervene in succession. Even in the event of an unlikely total breakdown, the second protection is able to interrupt quickly the power of the heating element, being constituted by a fluid expansion switch and a temperature probe, which are totally independent from the electronics. All Argolab instruments have a degree of protection of Class 2 at least.

The ovens and other instruments with more powerful heating elements are in Safety Class 3.1.

# Super PROJECT

# REFRACTOMETERS

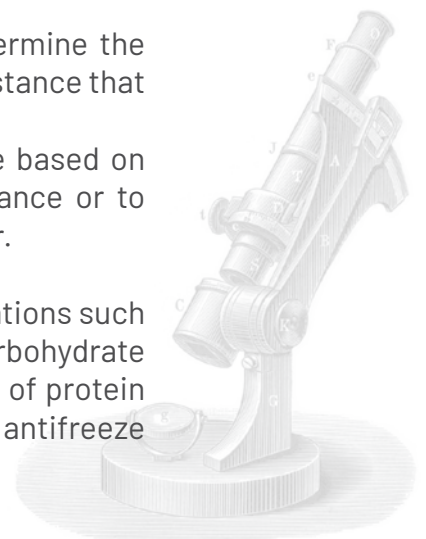

WARRANTY  
**2**  
YEARS

A refractometer is an optical measuring instrument used to determine the refractive index of a substance, or some physical property of a substance that is directly related to its refractive index.

It can be used to establish the identity of an unknown substance based on its refractive index, to establish the purity of a particular substance or to determine the concentration of one substance dissolved in another.

Commonly the refractometers are used to measure fluid concentrations such as the sugar content (Brix level) of fruits, vegetables, juices and carbohydrate drinks or for cutting fluids, specific gravity of urine, concentration of protein in the blood, degree of moisture in the honey (myelometer), salinity, antifreeze properties, industrial fluids.

# Industrial pH Electrodes

Many XS process electrodes have an encapsulated reference system that guarantees a long life to the electrode and a constant reference potential. The reference system is separate from the electrolyte, which allows you to use a filler free of AgCl and guarantees high stability even if the electrode is subject to temperature fluctuations.

The XS sensors are available with PG13.5 outer tread and S7 head. For basic and special applications, including models which are equipped with temperature sensor inside for easy cleaning and fast temperature compensation.

Some models are designed to help in daily work in GLP condition with non-removable internal serial number and certificate for final quality test.

All XS sensors are connectable to all common transmitter/controller brands in the market.
